Introduction to Deep Learning (I2DL)

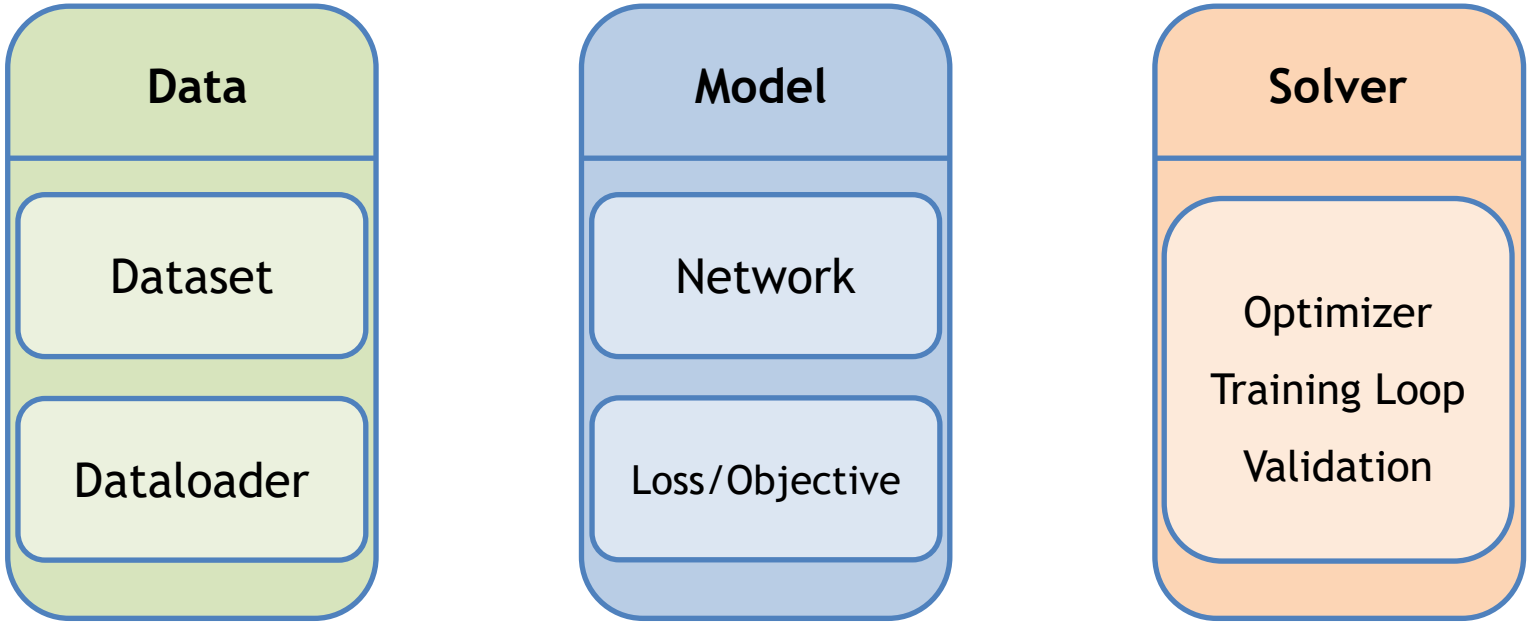
Exercise 4: Simple Classifier

Today's Outline

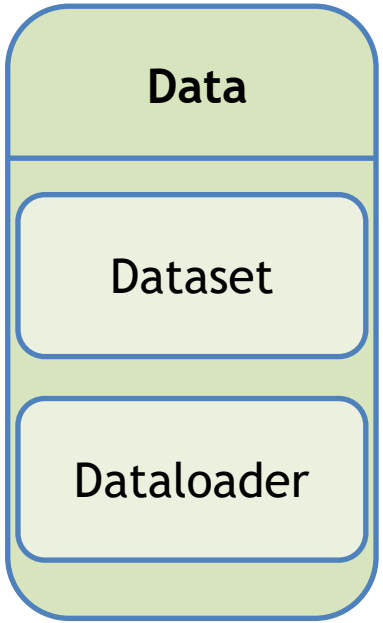
- The Pillars of Deep Learning
- Exercise 4: Simple Classifier
  - Housing Dataset
  - Submission 2
- Backpropagation
- Outlook: Lecture 5 + Exercise 5

The Pillars of Deep Learning

The Pillars of Deep Learning



The Pillars of Deep Learning



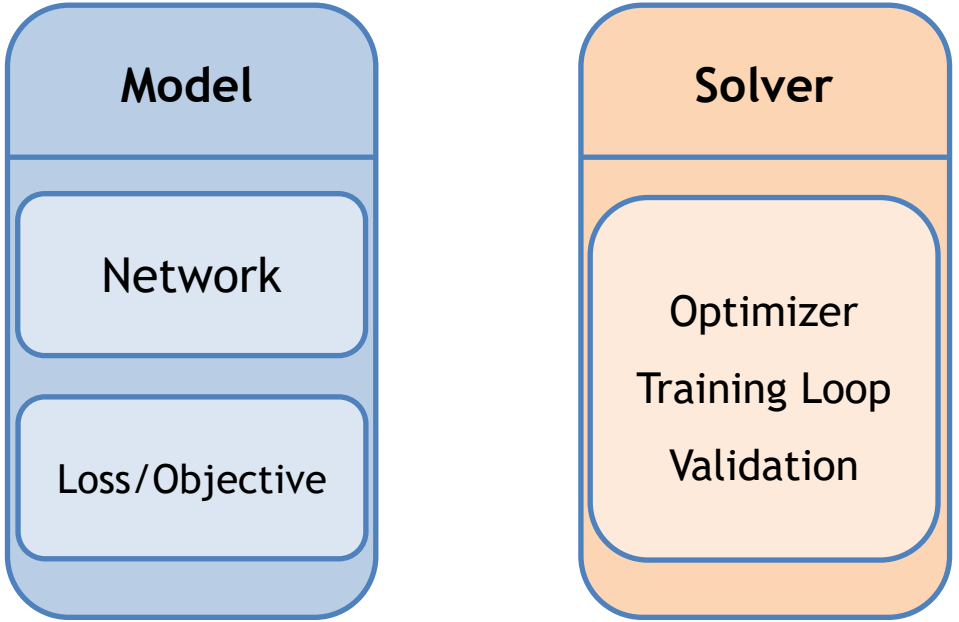
Exercise 3: Dataset and Dataloader

The Pillars of Deep Learning

Exercise 4: Simple Classifier

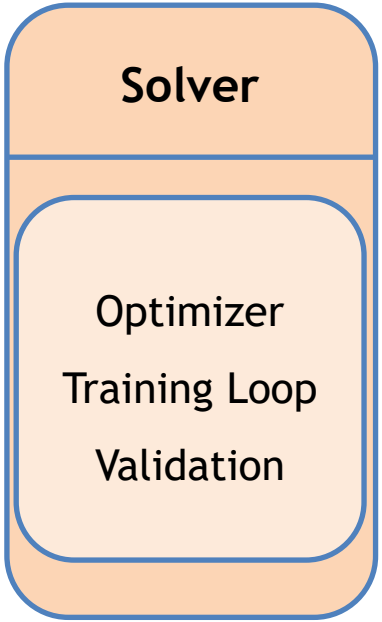
Exercise 5: Simple Network

Exercise 6: Hyperparameter Tuning



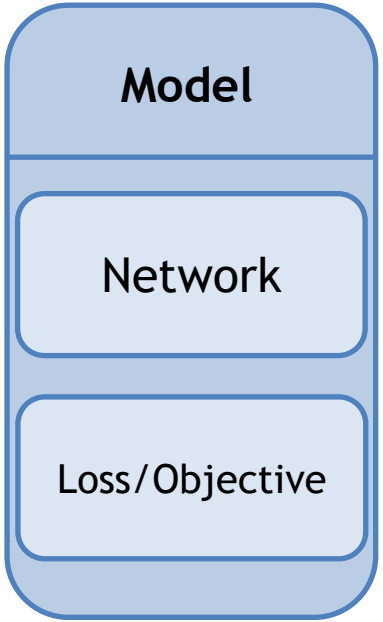
Goal: Exercise 4

- Goal: Trainings process
- Skip: Model Pillar
- Simplified Model: Classifier which is a 1-Layer Neural Network

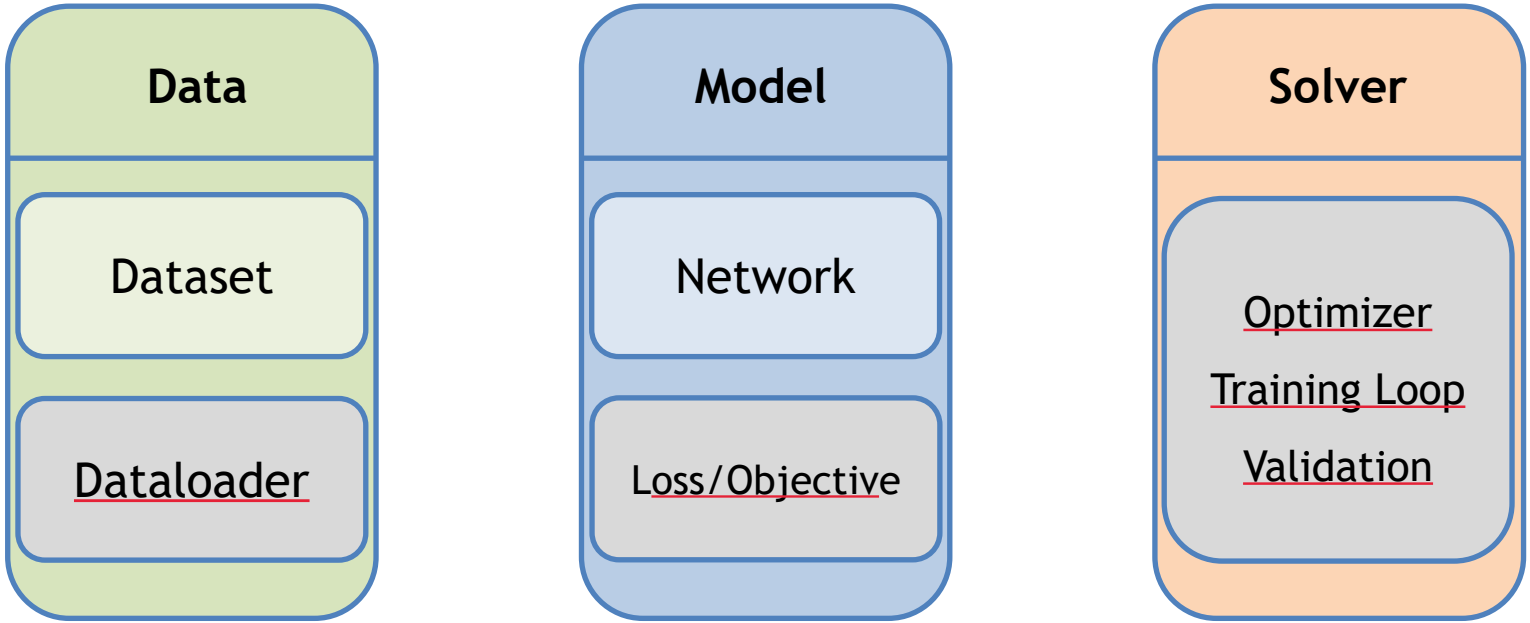


Goals: Exercises 5++

- Ex 3 + 4: Dataloading and Trainings process
- Ex 5++: Expand the exercises to more interesting model architectures



The Pillars of Deep Learning



✗ Can be implemented once and used in multiple projects

Exercise 4: Simple Classifier

Overview Exercise 4

- One Notebook
  - Logistic regression model

Fixed Deadline:
Dec 02, 2020 15.59

- Submission 2
  - Several implementation tasks in the notebook
  - Submission file creation in Notebook

Housing Dataset

- **Housing Dataset:** Data of ~1400 houses including 81 features like Neighborhood, GrLivArea, YearBuilt, etc.
- **Simplified model:** 1 input feature to predict the house price

housing_train

Id	Neighborhood	BldgType	HouseStyle	YearBuilt	YearRemodAdd	RoofStyle	CentralAir	GrLivArea	FullBath	HalfBath	Fireplaces	PoolArea	Fence	SalePrice

Submission 4 - Classifying House Prices

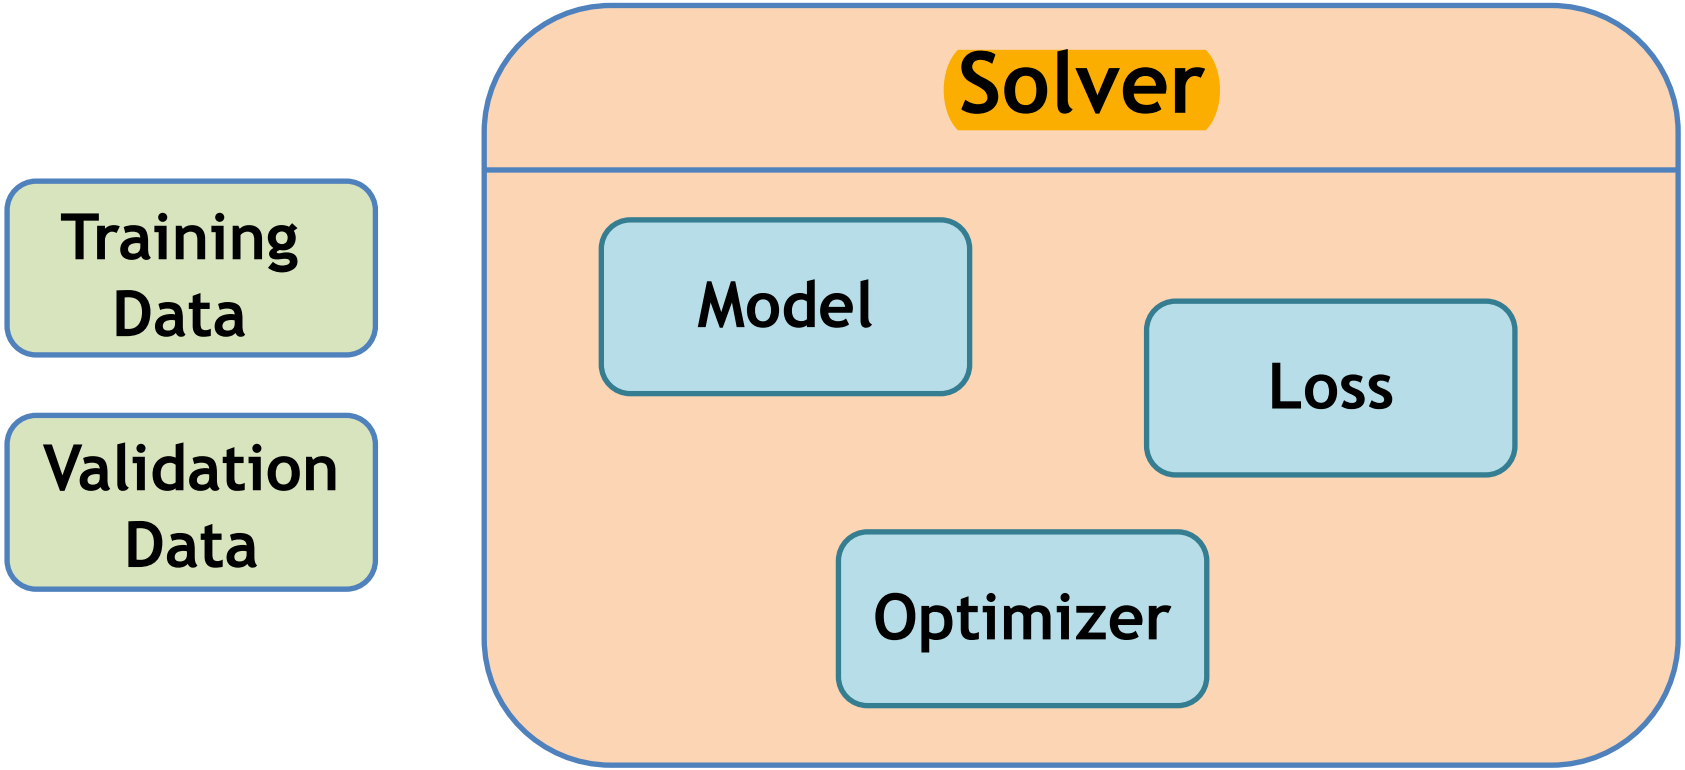
ML Model M
$M(\mathbf{x}) = \mathbf{y}$

Expensive $y = 1$

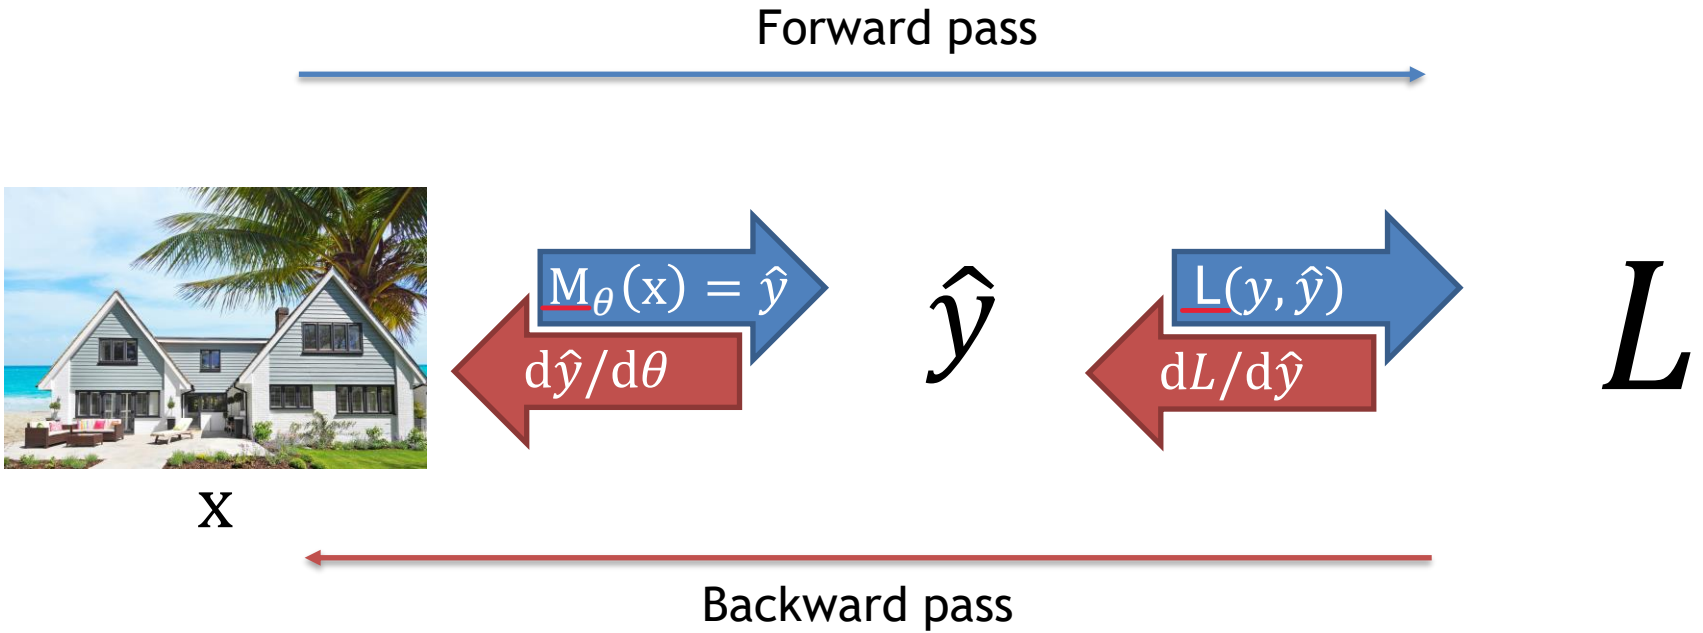
ML Model M
$M(\mathbf{x}) = \mathbf{y}$

Low-priced $y = 0$

3rd Pillar of Deep Learning



Backpropagation



✗ Binary Cross Entropy Loss: $L(y, \hat{y}) = y \cdot log(\hat{y}) + (1 - y) \cdot log(1 - \hat{y})$

Backpropagation

Forward pass

$\mathrm{M}_\theta(\mathrm{x}) = \hat{y}$

$\mathrm{d}\hat{y}/\mathrm{d}\theta$

$\hat{y}$

$\mathrm{L}(y, \hat{y})$

$\mathrm{d}L/\mathrm{d}\hat{y}$

L

x

Backward pass

✗ Optimization with gradient descent: $\theta_{t+1} = \theta_t - \lambda \cdot \nabla_\theta \mathrm{L}$

Backpropagation

Model

- **Input:** $X \in \mathbb{R}^{N \times D+1}$ representing our data with N samples and D+1 feature dimensions
- **Output:** Binary labels given by $y \in \mathbb{R}^{N \times 1}$
- **Model:** Classifier of the form $y = \sigma(X \cdot w)$
- **Sigmoid function:** $\sigma : \mathbb{R} \rightarrow [0, 1]$ with $\sigma(t) = \frac{1}{1+e^{-t}}$
- **Weights of the Classifier:** $w = (w_1, w_2, \ldots, w_{D+1}) \top \in \mathbb{R}^{D+1}$

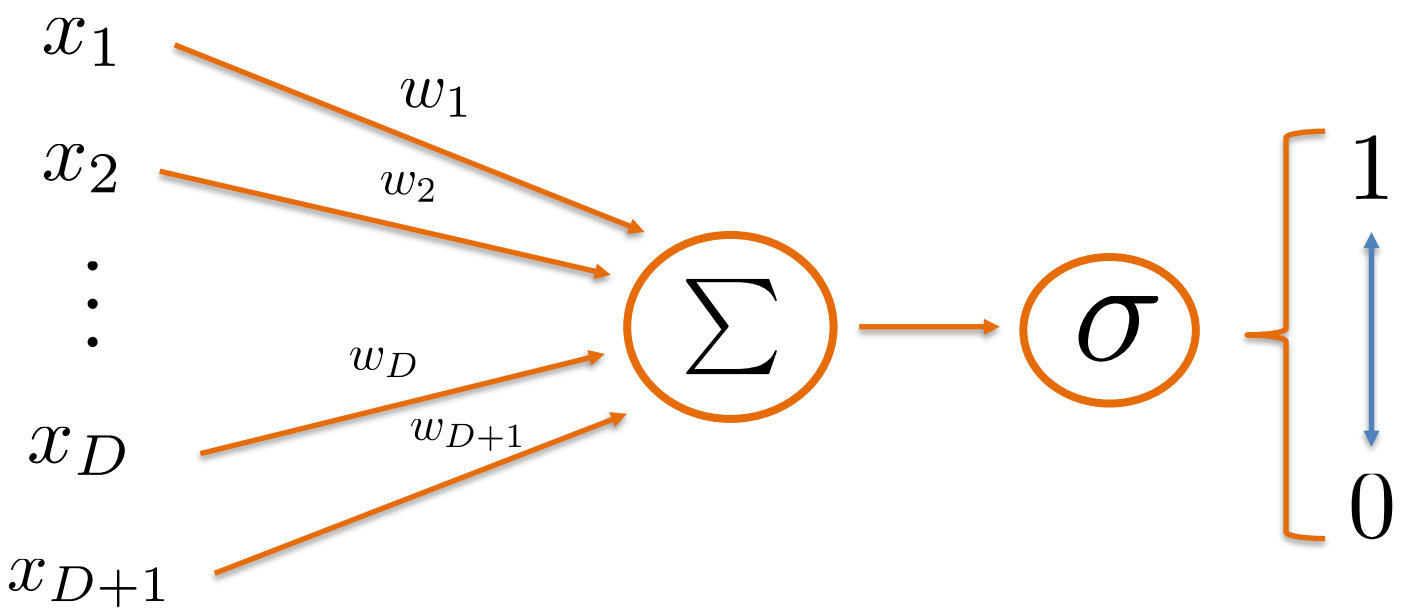
One sample

Sample

$x = (x_1, x_2, \ldots, x_{D+1})$

Forward Pass

for the model



Input Data X

$$X \in \mathbb{R}^{N \times D+1}$$

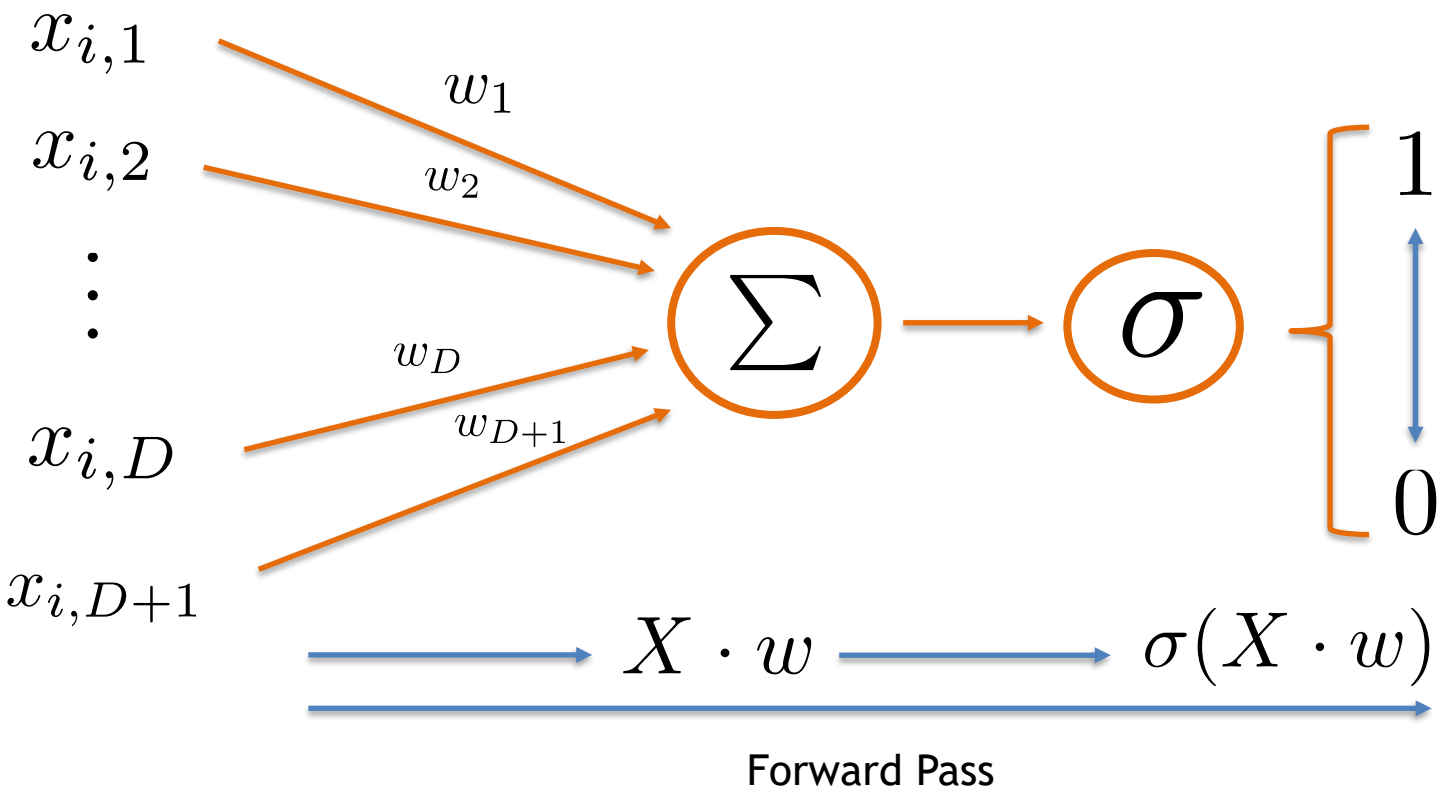
$$X = \begin{pmatrix} x_{1,1} & x_{1,2} & \dots & x_{1,D+1} \\ x_{2,1} & x_{2,2} & \dots & x_{2,D+1} \\ \vdots & \vdots & \ddots & \vdots \\ x_{N,1} & x_{N,2} & \dots & x_{N,D+1} \end{pmatrix}$$

Forward Pass

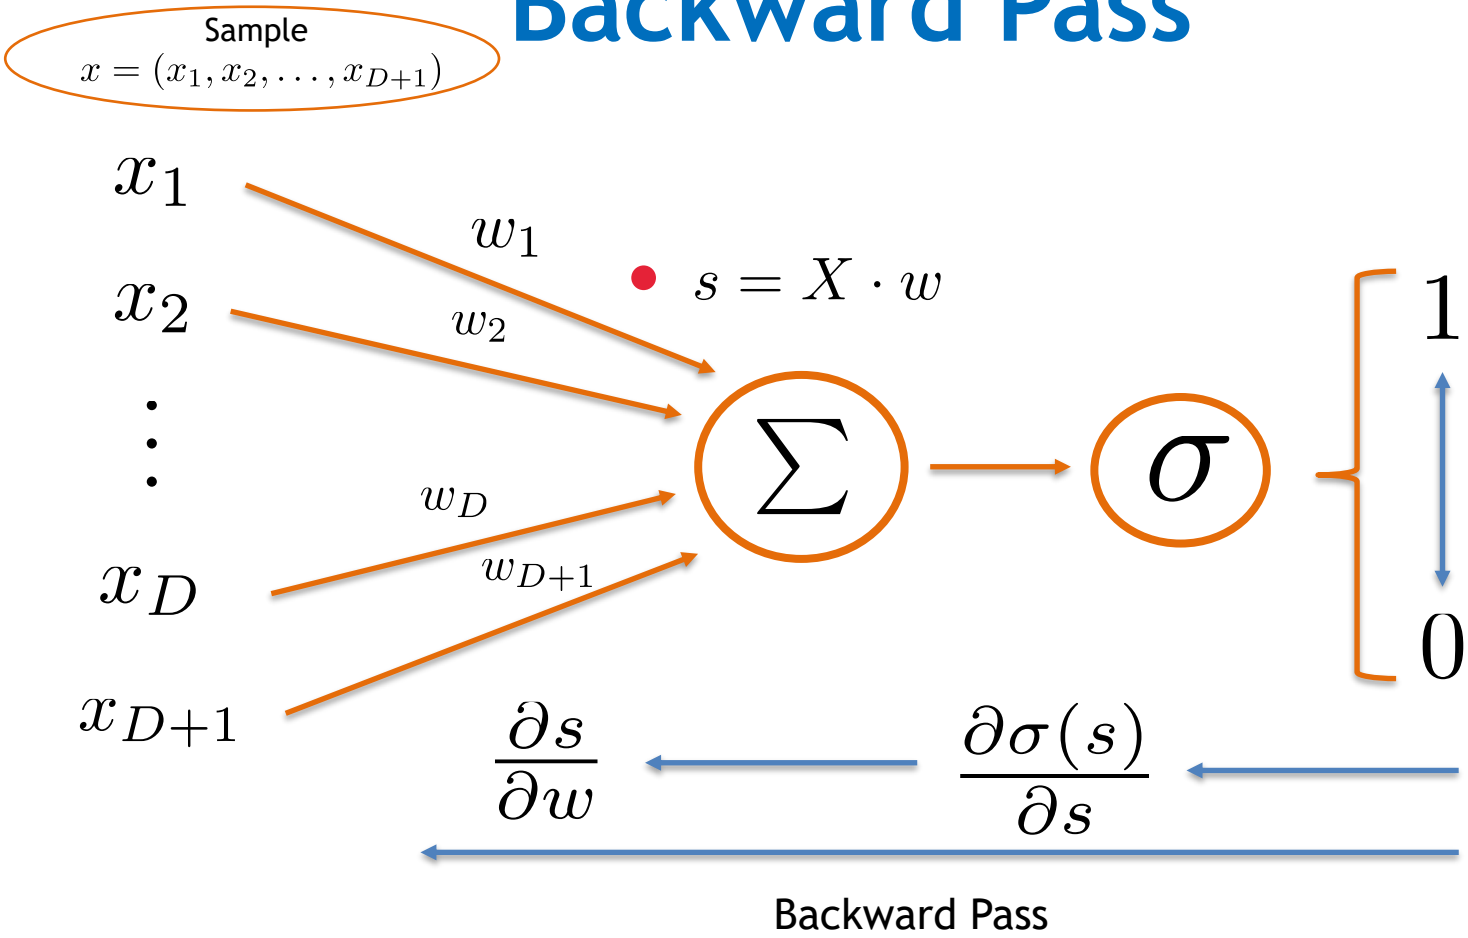
N samples

Sample

$x_i = (x_{i1}, x_{i2}, \ldots, x_{i,D+1})$



Backward Pass



Backward Pass

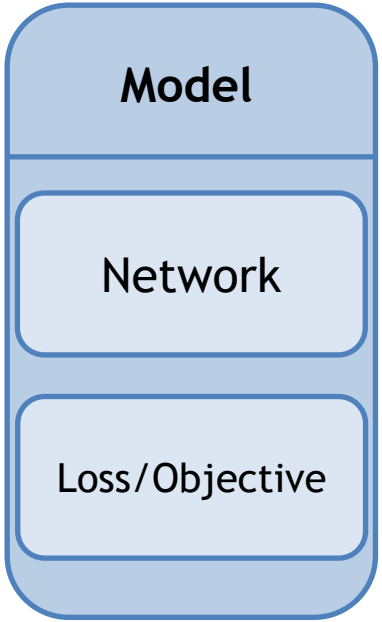
- **Backward Pass:** Derivative of function with respect to weights $w = (w_1, w_2, \ldots, w_{D+1})$ of our Classifier
- **Attention:** Make sure you understand the dimensions here
- **Step 1:** Forward + Backward Pass for one sample
- **Step 2:** Forward + Backward Pass for N samples

Outlook

Upcoming Lectures

- **Next lecture:**
  Lecture 5: Stochastic Gradient Descent

- **Next Thursday:**
  Exercise 5: Two-layer Neural Network (with Andreas)



See you next week ☺
